Availability survey: Mesopotamian texts (beyond the flood stories) for Hebrew translation

▼ Contents

0. Key findings **1**

1. Master table: one row per text **2**

1a. Akkadian literature: eBL corpus (all **verified**) 2

1b. Akkadian: ORACC projects (zips **verified**, HTML translations **verified**) 5

1c. Sumerian (ETCSL bulk, **verified** from `sources/ETCSL/_bulk/etcsl.zip`; ORACC ETCSRI zip **verified**) 8

1d. Law collections 12

1e. SEAL (OB/MB literature; **verified** listing + per-node fields) 13

1f. Public-domain and open-access books (archive.org **verified** via the metadata API; PDFs **verified** HEAD 200) 16

2. Access mechanisms: what worked and what failed **18**

Appendix A: eBL chapters with lines (generated from the API; preservation as defined in the legend) **19**

Appendix B: ETCSL selected compositions (from the local OTA bulk; the web URL pattern is reported, since the site timed out) **40**

Appendix C: SAA 3 (ORACC saao/saa03), per text **47**

Appendix D: SEAL nodes with text (197). Columns: genre-term, node, title, lines, words, translation Y/N, count of [..... **49**

Compiled 2026-10-16 for the תרגומי-טקסטים-קדומים project. Nothing was translated and nothing was written into `sources/`. Raw API responses, zips and scripts are cached under `/private/tmp/claude-501/-Users-giladben-dor-dev-perush----------/2c8a8da9-f235-4164-8149-4d1791735ef2/scratchpad/availability/` (subfolders `ebl/`, `oracc/`, `etcsl/`, `seal/`, `laws/`, `pd/`, `scripts/`).

Legend

- **verified** = I fetched it on 2026-10-16 and checked the content: HTTP 200 plus the expected data, with line counts computed from the data. **reported** = from catalogues, search results or my own knowledge, not checked by fetching.
- **Lines** = the edition's line count: a composite (eBL, ETCSL, ORACC Q-texts) counts verses; a single tablet (CDLI P-texts, SEAL) counts tablet lines.
- **Preservation.** How each corpus was measured:
  - *eBL*: computed from the reconstruction tokens of every line. A line is "intact" if no word has any broken sign, "partial" if some word is broken or there is a **[...]** gap, and "lost" if every word is broken. "Words in [ ]" is the share of words entirely inside brackets, **restored or lost**.
  - *ORACC*: the share of words whose graphemes are all marked `break: missing`, again restored or lost.
  - *ETCSL*: lines containing a `<damage>` milestone or an illegible `&X;` sign; "heavily broken" means ≥ half the words are illegible or there are no words. Gaps are summed from the `<gap extent>` notes.
  - *SEAL*: the count of `[` in the transliteration.
- **Lic.** = licence. **PD** = public domain.

---

0. Key findings

1. **The eBL corpus is the best source for SB Akkadian literature** (verified): it has a normalised composite, an English translation of nearly every line, lemmas, all manuscripts and notes. 222 of its 300 chapters actually have lines (53 of those are divination/medical), and 166 are literary, magical or šu'ila chapters. It has complete or near-complete editions of Enūma eliš (1,098 lines, very well preserved), all of Gilgameš SB I–XII (2,683 lines) plus 26 OB/MB/NA chapters, Ludlul I–V (534), Theodicy (288), Anzû (OB + SB, 694), Etana (OB/MA/SB, 585), Descent of Ištar (159), Nergal and Ereškigal (MB 87 + SB 333), Adapa (175), Poor Man of Nippur (161), Cuthaean Legend (345), Counsels of Wisdom (159), Dialogue of Pessimism (93), Advice to a Prince (55), the fables, 11 Great Hymns and Prayers (Šamaš Hymn = "Great Prayer to Šamaš", 200), Maqlû I–VIII + RT (1,595, Abusch) and about 45 šu'ilas.
   - **Empty chapters (verified):** Erra II–V (only Tablet I, 191 lines, has text), *Šimâ milka*, Aluzinnu, the Series of the Fox, Prayers to Marduk 1–2, OB/MB Angim, Bīt mēseri RT.
   - **Not in the corpus at all:** Šurpu, the Marduk Prophecy, the Sargon Birth Legend.
   - **Licence:** none is stated. The site footer says "© electronic Babylonian Library" (verified in the ebl-frontend source), and the code is MIT. Treat the editions as copyrighted.

2. **ORACC** (verified):
   - SAA 2 (Esarhaddon's Succession Treaty, 691 lines, 4% bracketed), SAA 3 (52 literary texts), SAA 9 (11 prophecy texts), RINAP 3 (Sennacherib, 261 texts), TCMA/laws (Middle Assyrian Laws, 48 tablets), CAMS/Ludlul, CMAwRo/Maqlû (9 composites), AkkLove (32 SEAL love texts) and ETCSRI (Gudea cylinders, 1,298 lines) are all downloadable as zips.
   - **The zips hold no translations.** The per-text HTML view (`/<project>/<id>/html`) does include the English translation (verified for SAA 2, SAA 9, RINAP 3, Ludlul, Maqlû, MAL and AkkLove).
   - **Licence:**
     - The zip `metadata.json` says "CC0".
     - Every SAAo/RINAP/TCMA catalogue record and project page says "The annotated edition is released under **CC BY-SA 3.0**".
     - The AkkLove page says "© SEAL project".
     - So treat the translations and editions as CC BY-SA 3.0 (AkkLove as ©), and the raw lemmatised data as CC0.
3. **CDLI has full composites, with English translations, of the four OB/Ur III law collections** (verified, a major find):
   - Laws of Hammurabi P464358: 3,641 lines, with transliteration, normalisation (`#tr.ts`) and English for every line.
   - Lipit-Ištar P464355: 503 lines.
   - Ur-Namma P432130: 456 lines.
   - Eshnunna P480696: 195 lines, with normalisation and English.
   - There is also the full ATF of the Louvre stele, P249253 (3,642 lines).
   - CDLI Terms of Use: transliterations and translations "may be freely copied, aggregated and re-used according to common and fair academic practice", with attribution. Images are restricted.
   - The translator of the CDLI English is not named in the ATF.
4. **ETCSL** (the local bulk copy, CC BY-NC-SA 3.0, verified): it has all 394 Sumerian compositions with English prose translations, 381 translation files in all. It has **no law collections**; those are in CDLI and ETCSRI (the ETCSRI copies of Ur-Namma and Lipit-Ištar are only short prologue fragments).
5. **SEAL** (verified): about 200 OB/MB texts with transliteration and English translation. The highlights:
   - the **prologue and epilogue of the Code of Hammurabi** (node 7520, 800 lines);
   - **Agušaya A + B** (311 + 137 lines);
   - the OB Ištar hymn "Ištar Louvre" (248);
   - **OB Gilgameš** II and III (216 and 247), plus 12 smaller OB Gilgameš tablets;
   - OB **Etana** (102), OB **Anzû** II–III (82 + 34);
   - the Sargon and Narām-Sîn legends;
   - the OB "**Man and his God**" (69);
   - "A Father and his Son" (549);
   - the **love lyrics** (LAOS 4: 1, 143 lines; ZA 49, 108; YOS 11 24, 43 ...);
   - the new LB "Divine Love Lyrics" (46 manuscripts) and the LB chronicles (ABC 7 Nabonidus Chronicle, ABC 17, 22, 23).

   Many MB entries (Gilgameš MB except Boğazköy 1 and Ugarit 1; Etana MA; the Tukultī-Ninurta Epic; the Cuthaean Legend MC 7 21A/B; Lugal-e; Šūpê-amēli; the Instructions of Šuruppak MB; Anzû MB) are **catalogue entries without text**. The licence is not stated (© HUJI per the footer).
6. **Public domain**, verified on archive.org:
   - King 1902, *Seven Tablets of Creation* I–II;
   - Harper 1904, *Code of Hammurabi*, with transliteration and translation;
   - Zimmern 1901, *Beiträge* (contains **Šurpu**, the only legal full edition found for it);
   - Thompson 1903–4, *Devils and Evil Spirits* (Udug-ḫul);
   - King 1907, *Chronicles*;
   - Langdon 1923, *Babylonian Epic of Creation*;
   - Luckenbill 1924, OIP 2, *Annals of Sennacherib* (free ISAC PDF).

   Open access: Lenzi (ed.), *Reading Akkadian Prayers and Hymns* (SBL ANEM 3, 2011; PDF verified 200, 6.2 MB) and Rozzi, *The Akkadian Great Hymns and Prayers* (Ca' Foscari 2024; page verified, CC BY reported).

The OAPEN/DOAB APIs were blocked (403), so this is not exhaustive.

2. Access mechanisms: what worked and what failed

Mechanism	Result
`python3 -I tools/ebl_fetch.py --list`	**Not run successfully.** I wrapped it in `timeout`, which does not exist on macOS ("command not found"). I used `GET https://www.ebl.lmu.de/api/texts` directly (84 texts, 0.5 MB) instead.
eBL `GET /api/texts/<g>/<c>/<i>/chapters/<stage>/<ch>/display`	**Works**, ≈ 1 s per chapter (the plain `/chapters/...` endpoint is ≈ 6 s). Returns `lines[].variants[].reconstruction` tokens with `enclosureType`, `translation[]` (en/de/ar/la), `manuscripts`, `record.authors/translators`, plus `atf`. **Genre `Šui` and chapter names such as `Boğ`, must be percent-encoded**; unencoded, `urllib` fails. `Mag/4/1/Standard Babylonian/IT` → HTTP 500. 78 of 300 chapters have 0 lines (after the Šui retry).
eBL licence	No licence in the API, the about pages (ebl-frontend `src/about/ui/*.tsx`) or Zenodo. The footer says "© eBL". The dictionary page says reproduction needs the publisher's permission.
ORACC zips `https://oracc.museum.upenn.edu/json/<proj>.zip`	**Work.** HEAD gives size and date. They contain `catalogue.json`, `corpusjson/<id>.json` (CDL with `f.gdl` grapheme `break: missing|damaged`), glossaries and indexes. **No translations.** Some JSON files are empty (akklove P355910). cmawro-maqlu: 816 catalogue entries, only 9 texts.
ORACC HTML `https://oracc.museum.upenn.edu/<proj>/<id>/html`	**Works, with translations** (SAA 2, SAA 9, RINAP 3, Ludlul, Maqlû, AkkLove, ETCSRI). **Exception:** `/tcma/laws/<id>/html` gives "px: error: unable to open dbi"; use `/tcma/<id>/html`.
ORACC licence pages	`/saao/`, `/rinap/`, `/ribo/`, `/tcma/`, `/etcsri/`, `/cams/gkab/`: "Content released under CC BY-SA 3.0". Zip metadata: "CC0". Per-text `credits`: "annotated edition … CC BY-SA 3.0". `/akklove/`: "© SEAL project". `/rinap/license/`: 404.
CDLI `GET https://cdli.earth/artifacts/<n>` with `Accept: application/json`	**Works.** Full record including `inscription.atf` (with `#tr.en`/`#tr.ts` for composites). `/artifacts/<n>.atf` → 500; `/P<n>` → 302.
CDLI search `https://cdli.earth/search?simple-value[]=<q>&simple-field[]=keyword` + `Accept: application/json`	**Works.** Returns full records with ATF (≤ 25 per page). Found all the law composites.
CDLI Terms of Use `https://cdli.earth/terms-of-use`	Transliterations and translations are freely reusable with attribution. Images are non-commercial and © the owners.
SEAL	No API. Listings at `/taxonomy/term/<tid>?page=N` (rows link `/index.php/node/<n>?tid=`). Node pages have Drupal fields `field--name-field-text`, `-translation`, `-lines-in-text`, `-words-in-text`. 295 nodes fetched; 197 have text.
ETCSL	Local OTA bulk (`sources/ETCSL/_bulk/etcsl-unzipped/etcsl/`) parsed fine (latin-1; entities pre-substituted). Live site not retried.
archive.org `advancedsearch.php` + `/metadata/<id>`	**Works** (identifiers, PDF/djvu.txt names, `possible-copyright-status`).
en.wikisource API	**Works** (`action=query&list=search`).
OAPEN `library.oapen.org/rest` and DOAB `directory.doabooks.org/rest`	**Fail**: HTTP 403 "Your address is not allowed to access this API."
ISAC S3 PDFs, SBL OA PDF, PHAIDRA	Work (HEAD 200).
