Cross-corpus harmonization after Round 4 (2026-10-30; the lead, by the user's delegation)

▼ Contents

A. Changes (apply these) 3
B. Kept, with the reason (record, no change) 6
C. Applied 8

Principle (as in the passes of 2026-10-21 and 2026-10-23, guidelines §6.7): one Hebrew per source word across the
corpora; the majority / earliest corpus wins unless the cognate rule (§6.4.2, §5.2 "When two source words collide in
one Hebrew word, the cognate keeps it") or a recorded reason decides otherwise. Round 4 brought the first non-Semitic
corpora (Egyptian, Greek, Hittite) and a cousin Semitic one (Ugaritic), so most of its splits are **across languages**;
they are settled by three principles (now in guidelines §6.7, "Cross-language principles"):

1. **A cognate reservation protects a Semitic text's own cognate, not the common vocabulary of every language.** In a
   non-Semitic corpus (Egyptian, Greek, Hittite, Sanskrit, …) the Akkadian corpora's cognate reservations – עָבַר
   (*ebēru*), לָקַח (*leqû*), נָשָׂא (*našû*), הִשְׁלִיךְ (*nadû*), קָרָא (*nabû*), שָׂם (*šakānu* / *ĝar*), נָצַר /
   שָׁמַר (*naṣāru*), יָרֵא (*palāḫu*), חָתָן , טָרַף , גְּבוּל … – do not apply: the text uses the natural Hebrew word
   by sense, tagged [equivalent], and its own gates (if any) license it by its own lemma. The common Semitic words
   (נָשָׁר , אָלָה , כָּבֵד , תָּבֵן , טִיט , מִדָּה , שֵׂכָר , אַלְמָנָה …) are [cognate] in an Akkadian or Ugaritic line and
   [equivalent] in another language's line.
2. **A loanword's Hebrew belongs to its source language** (Egyptian חַרְטֹם , הֲבָנִים , תֵּבָה …;
   Akkadian אֲרִיס ,
   מִסְכֵּן …; a Greek word with its own LXX identity keeps its LXX Hebrew): another language uses it only where Hebrew
   has no other word for the thing, and the note says it is a loanword from elsewhere.

3. **Inside one language (or two Semitic cousins), the cognate keeps the Hebrew and the other word moves**; a fixed
   formula keeps its Hebrew against a general reservation (*abūba šakānu* חוֹלֶל מַבּוּל against *šakānu* = שָׂם).
   In Hittite, an Akkadogram (written in Akkadian: UMMIĀNU, ASĪRU, ANZELLU, ILKU) **takes the Hebrew of its**
   Akkadian word; a Sumerogram writes a Hittite word and is rendered by sense (TÚG בֶּגֶד, ZABAR אֶרֶד, MUḪALDIM
   מְבַשֵּׁל).

Survey tool: `tools/harmonize_survey.py` (src / heb / parse / words), on the `>` lines.

A. Changes (apply these)

#	Source word	Hebrew (binding)	Lines to change (corpus · file label)	Reason
1	*imtu* "venom"	חֵמָה [cognate] (construct חֲמַת; vocalized wherever it could read "sun" or "anger")	Enūma eliš: every ארס of *imtu* (I 136, 162; II 22; III 26, 84; IV 53, 62; V 51; and every other line that carries it: the refrain בארס → כדם מילאה את גופם בְּחֵמָה כְּדָם מילאה את גופם, identical in all copies); Maqlû III 14 בחמתה → בארסה, III 21 את → את ארסך חמתך	the cognate (Deut 32:24, 33 חֲמַת זֹחֲלֵי עָפָר, חֲמַת תַּנִּינִם); Erra I and Ugaritic *ḥmt* already חמה; אֶרֶס is not the cognate. Hesiod's Ares אָרֵס is only a homograph
2	*šurhungû* (Maqlû's list of witchcraft effects; < Sum. *šà-ḫun-ĝá* "heart-calming")	הַשְׁקָטַת לֵב	Maqlû I 90, IV 11 השקטת → השקטת חמה לב; V 59 את השקטת → את השקטת החמה הלב (and the fixed-lines table, renderings §9)	frees חֵמָה for *imtu* inside Maqlû (row 1); the literal Sumerian; כַּעַס is *agāgu*'s (Enūma eliš IV 76) and נִרְגַּע is *pašāḫu*'s
3	*ummânu* / Sum. *um-mi-a* / Hitt. UMMIĀNU "craftsman, expert"	אֻמָּן (vocalization)	Gudea: the renderings row (אֻמָּן → אָמָּן) and any vocalized אֻמָּן in its lines	the flood corpus, Erra, the Hittite Laws אֻמָּן (majority, earliest); the [cognate] note keeps Song 7:2 אָמָּן

#	Source word	Hebrew (binding)	Lines to change (corpus · file label)	Reason
4	*nuḫatimmu* / Sum. *muhaldim* / Hitt. MUḪALDIM "cook"	מְבַשֵּׁל (by sense)	Nergal and Ereškigal SB b+42, c+57 האופה → המבשל; Adapa SB a+10 עם האופים את → עם האפייה עושה המבשלים את הבישול עושה, a+11 עם אופי ארידו את האפייה ⟨עושה⟩ → עם מבשלי ארידו את הבישול ⟨עושה⟩; Bird and Fish 90 האופה, מבשל → השכר המבשל, מבשל השכר; Summer and Winter 213 → טבח מבשל	אוֹפֶה is the cognate of *ēpû* "baker" (NINDA.DÙ.DÙ in the Instructions, which has both words in one line, 14.2); טַבָּח is *ṭabāḫu*'s (§6.7); the Instructions already מְבַשֵּׁל־הַשֵּׂכָר . המבשל stays the brewer's (*lunga*, LÚ.KAŠ)
5	*siparru* / Sum. *zabar* / ZABAR "bronze"	אֶרֶד (vocalized at its first occurrence in each text and wherever it could read "I will go down")	Gilgameš SB I 25 and its copy in the flood references 25 נחושת → ארד; the flood references o 9; EST 530 (→ שמים של נחושת שמים של ארד), 649; LH 2612′, 2616′, 2631′, 2635′, 2641′, 2645′ באיזמל → באיזמל נחושת ארד; Maqlû II 38, 76, 92, 104, RT 33′, 34′ (צלם → צלם נחושת ארד); Ludlul IV a+21 כארד → כנחושת; every other line whose source is *siparru* / ZABAR	one source word, one Hebrew: the Sumerian corpora (Gudea, Inana, Ur-Namma, EWO) and the Hittite texts have ארד, and the Hittite rituals (AM 113, 190) and EWO 232 need both metals in one line. Copper – *erû* / *urudu* / URUDU – keeps נְחֹשֶׁת; Greek χαλκός keeps נחושת (the LXX's word). EST 530's note keeps Deut 28:23 שָׁמֶיךָ ... נְחֹשֶׁת as [equivalent] (not a cognate: the bronze sky, in other words)

#	Source word	Hebrew (binding)	Lines to change (corpus · file label)	Reason
6	*ṣubātu* "garment" (Akkadian)	שִׂמְלָה	Erra I 141 → בגדיי → בגדך 181 ,שמלותיי שמלתך; MAL A r v 48 בין שמלה → בין בגד; Ludlul II 71 (כ)→ בגד שמלה(כ)	Gilgameš (7), the Descent of Ištar (3), Nergal, Adapa שמלה (majority, earliest). The Hittite TÚG keeps בגד (a Sumerogram, principle 3); Sum. *tug₂* stays as settled on 2026-10-23
7	*ḫalziqqu* "waterskin" (the Descent of Ištar)	חֵמָת (always vocalized)	Ištar 98 אל → אל הנאד → החֵמָת, 99 את הנאד את החֵמָת (and its NA copy if it carries the word)	נאד is the cognate of *nādu* (Gilgameš, EST, Maqlû, Erra I 58); [equivalent] Gen 21:14 וְחֵמַת מָיִם
9	*uggatu* "fury" (added during batch A, which found it)	קֶצֶף	Ludlul I 5 שממה חמתו שממה קצפו →, I 37 אגלה → אגלה את חמתו את קצפו (and the wisdom corpus renderings row "*uggatu* … חֵמָה")	Enūma eliš II 78 and Adapa (MB 61′, SB c+2) already קצף (majority, earliest); frees חֵמָה for *imtu* (row 1). Erra's קצפתי (*agāgu*) shares the root, as the verb and noun of one idea; Hesiod's קצף "foam" is a homograph
8	Eg. *ḥr.t-nṯr* "necropolis" (the Heavenly Cow)	חֶלְקַת־הָאֵל	HC (the line before 94) חי → חי בנחלת־האל בחלקת־האל	נַחֲלָה is the Ugaritic *nḥlt*'s cognate (Mot's land), and נַחֲלַת ה' would read as the biblical inheritance (a false echo); *ḥr.t* is "portion, possession"

For every change (as on 2026-10-23): the `>` line; the parse bullet's ("…") for that word; any note or parallels-index
row that quotes our rendering (never a backticked Bible quotation); the corpus `renderings.md` row, plus one line
"2026-10-30 harmonization" listing the changed lines; regenerate `translation*.rtl.md` with the corpus builder; the
parallels index (by its builder) if a row changed; then the corpus verifier `--strict` and `check_bible_quotes.py`.

If a verifier enforces the old word (a formula, a fixed line, a gate), change the verifier. Any line where the change
would break the sense: skip it, and report.

B. Kept, with the reason (record, no change)

- **נָחָשׁ**: Etana's *ṣerru*, Ugaritic *nḥš* (the cognate, reserved there) and the dossier's comparison word for
  every culture's serpent – three languages; each is its own corpus's word (principle 1).
- **אָלָה**: Ugaritic *alt* (1.82, the cognate) and the law corpus's *māmītu* (EST has both *māmītu* and *tamītu*,
  2026-10-17); the wisdom and creation corpora's *māmītu* שְׁבוּעָה stays (settled earlier). Two languages.
- **שַׁרְבִיט**: Ugaritic *ḫṭ* = Akkadian *ḫaṭṭu* (2026-10-23): one word, as it should be.
- **Names**: Resheph רֶשֶׁף, Dagan דָּגָן as in the Ugaritic §6.7 line; Athtart עַשְׁתֹּרֶת beside Ištar אִשְׁתַּר – each
  language its own form (§6.4.6).
- **The common Semitic words** of the Egyptian corpus (כֹּבֶד, תֶּבֶן, טִיט, מִדָּה, שֶׂכֶר, אַלְמָנָה) – principle 1.
- **הָבְנִים**: Westcar's *hbnj* owns it (the loanword's source); Gudea's Sumerian *esi* "ebony" keeps it too – Hebrew has
  no other word for ebony (principle 2); its note says the Hebrew is an Egyptian loanword.
- **וְזִיר** (HC *ʦʔtj* = *sukkallu* / *sukkal*, by sense), **סוֹכֵן** (AM *rwḏ.w*, Gudea *aĝrig*, the Advice's *šatammu*,
  by sense), **חוֹכֵר** (AM *ḥwtj*, leaving אָרִיס to *errēšu*), **מְכִמֹּרֶת** (AM *mkmr.t*, a Semitic loan, = *kamāru*).
- **נָצַר / שָׁמַר** for the Egyptian protect-words (*nḏ*, *zꜣw*, *mkj*): the Akkadian reservation is Akkadian-only
  (principle 1).
- **כּוּשׁ** for Αἰθίοψ and for Kush in every corpus; the plural כּוּשִׁים is never used (a slur in Modern Hebrew): no
  corpus has it (surveyed).
- **Greek words with their own LXX identity** (principle 2): אַגָּן κρατήρ (Exod 24:6 LXX; the everyday-voices trap is a
  Song-of-Songs reservation for Akkadian), אוֹת σῆμα (by sense, beside the Mesopotamian cognate *ittu*), נָשָׁר ἀετός
  (= Etana's *erû*, [equivalent] in both), דָּבָר λοιμός, קָלוֹן the Ugaritic *qlt* and כְּלִמָּה αἶσχος.

- ***šubtu*** "seat, dwelling": Gilgameš (with the Descent of Ištar, Nergal, Maqlû, Etana) מִשְׁכָּן – Gilgameš keeps
  מוֹשָׁב for *mūšabu* (its pattern-cognate, I 208, 215; OB II 58, 60), and the formula *šubat irkalla* מִשְׁכַּן אִירְכַּלָּה
  is shared by three texts – against Enūma eliš, LH and Erra מוֹשָׁב. Kept by text (no text has both renderings for
  šubtu); the exact cognate שֶׁבֶת collides with the reserved string שבת.
- ***emqu*** חָכָם beside *apkallu* חָכָם (adjective and noun, by sense); ***malku*** מֶלֶךְ [cognate] beside *šarru*
  מֶלֶךְ (Hebrew has one word for "king").
- ***mātu*** / ***erṣetu*** both אֶרֶץ (every Akkadian corpus; the Descents' reservation of הָאָרֶץ for the netherworld does
  not meet Erra I, whose netherworld is *erkallu* / *kurnugû* / *arallû*).
- ***abūba šakānu*** חולל מבול (the flood formula) against *šakānu* = שָׂם: a formula wins (principle 3).
- **Hittite common vocabulary** (principle 1): הֶעֱבִיר / עָבַר (*zinu-*, *zai-*), לָקַח (*dā-*), נָשָׂא (*peda-*), הִשְׁלִיךְ (*pešš-*), קָרָא (*ḫalzai-*), שָׂם (*dai-*; the Laws, the Instructions and the rituals all שׂם), גְּבוּל (*arḫa-* / ZAG; MAL B, the wisdom corpus and the legends gate גבול for their own Akkadian words), טָרַף (*karap-*, Exod
  22:12 [equivalent]; Ur-Namma's reservation is Sumerian), פָּגַע (*ḫapallašai-*), חֲתַן־בַּיִת (HL1 185), חָצָה
  (*šarra-*, beside Sum. *bal*), יָרֵא (*naḫḫ-* = *palāḫu*: the same equivalent), הִטְבִּיעַ (*šiya-*; חָתַם stays the
  Egyptian loanword's).
- ***anzillu*** / ANZELLU: Etana תּוֹעֵבָה (beside *asakku* דבר אסור in the same line) and the Hittite ritual AM2 אִסּוּר
  (beside *ḫurkil* תּוֹעֵבָה, the Laws' word for the forbidden unions, Lev 18) – each text sets the word beside another
  that owns the other Hebrew, so they keep it by text (the exception to principle 3, recorded). The wisdom corpus's
  ikkibu תּוֹעֵבָה stays (Prov תּוֹעֲבַת ה').
- **GIŠ.ḪUR** "record, writing board" שֻׁטָר (the Instructions) against Gudea's *ĝiš-ḫur* "drawing, plan" צוּרָה: one sign,
  two meanings, two languages – by sense.
- **PA₅** פָּלַג in Hittite (= *palgu*, 2026-10-23) against the Sumerian corpora's *pa₅* תְּעָלָה (Gudea, EWO, the
  Farmer's Instructions, Hoe and Plough, Šuruppag, the letters, the Sumerian flood: the fixed pair סוללה ותעלה) – the
  Sumerian precedent where all the Sumerian corpora agree (as with *amar*, §5.2).

- **חֵלֶף** (*kaššaš* "substitute") beside MAL *kīmū* (cross-language equivalent; the noun, not *etēqu*'s verb חָלַף).
- **אָסִיר** (LÚ ŠU.DAB and the Akkadogram ASĪRU, one referent inside Hittite); **פַּסְלוֹן** (*šena-*, beside an Egyptian
  figurine, the same concept); **UDU.ŠIR אַיִל** (the Laws' and the rituals' word; no qualifier needed: אַיִל is the male);
  išuwan (HL2 163.3) מלח beside the rituals' MUN מלח – the word is uncertain (Hoffner), the line marks it.
- ***nai-*** הִפְנָה (rituals) / הִטָּה (HL2), ***memai-*** / ***tar-*** both אָמַר, ***uda-*** / ***uwate-*** both הֵבִיא: common verbs, by sense.
- **גוזל / אפרוח, רשת, פח**: not used in the Round 4 texts.

C. Applied

Applied 2026-10-30 in two batches, one agent at a time (Opus).

Batch A (rows 1–4, 8): Enūma eliš I 136, II 22, III 26, 84 (the refrain בְּחֵמָה כְּדָם מילאה את גופם), I 162, II 48,
III 52, 110 (חמתך הצבורה תרפה את העצום! – adjective and verb follow the feminine noun), IV 53, 62, V 51; Maqlû III 14, 21
(row 1), I 90, IV 11, V 59 (row 2); Gudea's renderings only – no Gudea line has *um-mi-a* (row 3); Nergal SB b+42, c+57,
Adapa SB a+10, a+11, Bird and Fish 90, Summer and Winter 213 (row 4); the Heavenly Cow 93 (row 8). The per-tablet
translation-I...V.rtl.md of Enūma eliš and translation-1-Adapa.rtl.md are hand-kept and were edited to match. Batch A
found row 9 (*uggatu*: the wisdom corpus had חֵמָה), added to the table and applied in batch B.

Batch B (rows 5–7, 9): Gilgameš SB I 25 and its flood-references copy, the flood references o 9, EST 530 (and the §64
heading 649 ,(שמי אָרָד, LH 2612′ (vocalized), 2616′, 2631′, 2635′, 2641′, 2645′, Maqlû II 38, 76, 92, 104, RT 33′, 34′
(and the §9 fixed lines), Ludlul IV a+21 כְּאָרָד (row 5); Erra I 141 (with its flood-references copy and the §12.6
fixed-lines table), 181, MAL A r v 48, Ludlul II 71 (row 6); Ištar 98, 99 (ומים מתוכה אשתה: the feminine חֵמֶת;
Gen 21:14 added as [equivalent]) (row 7); Ludlul I 5 שממה קְצָפוּ (vocalized: unvocalized it reads "they were angry"),
I 37 (row 9). Copper (*erû* / URUDU) stays נחושת in Gilgameš V 133, VIII 67, 163, Erra 160, the flood I_2 4, 9, the Šamaš
Hymn 94, LE, the Sargon legend, Maqlû RT 141′ and the love lyrics.

Kept after batch B: the Instructions' `TÚG-TUM` (IN 8.1, 8.9, 8.23) keeps `בגד` – a Sumerogram with an Akkadian phonetic
complement, not a spelled Akkadogram (principle 3).

Every touched corpus was rebuilt (translations, parallels indexes) and its verifier passed with `--strict`;
`check_bible_quotes.py` passed on every touched file; then every verifier of the folder was run (see `reports/round-4/final.md`).
