Cross-corpus harmonization after Round 5 (2026-11-02; the lead, by the user's delegation)

▼ Contents

A. Changes (applied) 3
B. Kept, with the reason (record, no change) 6
C. Applied 8

Principle (as in the passes of 2026-10-21, 2026-10-23 and 2026-10-30, guidelines §6.7): one Hebrew per source word
across the corpora; the majority / earliest corpus wins unless the cognate rule (§6.4.2; §5.2 "When two source words
collide in one Hebrew word, the cognate keeps it") or a recorded reason decides otherwise; across languages the three
principles of 2026-10-30 apply (a cognate reservation protects a Semitic text's own cognate; a loanword's Hebrew belongs
to its source language; inside one language – or two cousin languages – the cognate keeps the Hebrew, and a fixed
formula wins).

Round 5 brought four new corpora (Vedic and Avestan, the Hurro-Hittite myths, the inscriptions, and – inside existing
corpora – the Ugaritic epics, the Cuthaean Legend, the Poor Man and the fables, the Egyptian tales). Its runs settled
most collisions inside their own corpora; the items they left for the lead ("Cross-corpus splits left for the lead" in
`reports/round-5/run-1.md` … `run-6.md`, and the parent's items) were surveyed with `tools/harmonize_survey.py` on the
`>` lines, both ways (`src` / `parse` on the source word, `heb` on the chosen Hebrew). Few needed a change: most are
cross-language and allowed by the 2026-10-30 principles, or splits by sense inside one language with a reason.

Two new rules (guidelines §6.4 and §6.7):

1. **The echo tag on a proper name** (a place, a people, a person, a god): `[cognate]` when the name is the same word as
   the Bible's – the same name, even as a loan or a transcription (Nebo נְבוֹ, Dibon, Gad, Kemosh, Kutha כּוּת,
   Babylon, Memphis מֹף, Danel / Dan'el); `[equivalent]` only when the Bible names the same thing by another word.
2. **Cousin languages inside one corpus** (Sanskrit and Avestan; Ugaritic, Punic and Hebrew; Akkadian and its
   Akkadograms in Hittite): the cognate pair takes one Hebrew – principle 3 of 2026-10-30 applied across the two
   languages of a corpus (*aša* = *ṛ́tá* סָדָר, now *dātar* = *dhātár* מַעֲמִיד).

A. Changes (applied)

#	Source word	Hebrew (binding)	Lines changed (corpus · label)	Reason
1	Av. *dātar* (the epithet of Ahura Mazdā, formulas F4 / F4b)	מַעֲמִיד (as Skt *dhātár* הַמַּעֲמִיד, RV 10.190.3)	Vd 2.1 (F4), 2.39, 2.42, 2.43 (F4b) and every other *dātar* line; renderings F4, F4b, §11; the formula table of vedic_tools.py	the cousin cognate (rule 2 above), as *aša* = *ṛ́tá*; and עושה also renders Av. *kar-* / Skt √*kṛ* in the same text (שעשה יְיָ), which hid that the Avestan has two verbs. The verb *dā-* itself (*dātō* "I was made") stays by sense
2	Akk. *aggu* "furious"	קָצָף / קוֹצֵף (the root קצף)	the Cuthaean Legend SB 132 לקצף לב → לזעם לב אנליל אנליל; LH epilogue 3545′ הקוצף → הזועם; EST 475 *aggiš* בקצף → בזעם (the adverb)	Gilgameš VII 149, X 307, SAA 9 1 iv 7, the Theodicy 50, the Poplar d+14 already קוצף (majority, earliest); *aggu* is the adjective of *agāgu* קצף (Erra I); זָעַם is *ezēzu*'s (Enūma eliš, Ludlul, Counsels, Erra, the Cuthaean OB I)

#	Source word	Hebrew (binding)	Lines changed (corpus · label)	Reason
3	Hitt. *kupri-* "bitumen" (Ḫedammu 25:15–17)	כֹּפֶר [cognate, Gen 6:14] – licensed	hittite_tools.py: the root-כפר NEVER row (law §H3) licensed by *kupri-*; the two escapes in HE 25:15–17 removed	the Akkadian loan *kupru* (= the flood corpus's כֹּפֶר, 6.7§): a loanword keeps its source language's Hebrew (principle 2); the Hittite reservation of כפר is Lev 16's כִּפֶּר, not the bitumen
4	the law formula F8 (*pāi* ייתן)	scoped to the law keys	hittite_tools.py (the myth imperatives "give!" and Appu's narrative present no longer fire); their escapes removed	a law formula, not a word rule (the same scoping as the myth tables, MYTH_KEYS, §5.2)
5	the ritual formula F18 (*aššul* טובה)	scoped to its formula / the ritual keys	hittite_tools.py (the noun *aššul* in the Song of Release no longer fires); its escape removed	as row 4

#	Source word	Hebrew (binding)	Lines changed (corpus · label)	Reason
6	the echo tag on proper names	rule 1 above	the inscriptions corpus `/מילים-באבן` (the Mesha apparatus tagged the same place sometimes `[equivalent]`, sometimes `[cognate]`), Mesha 1 (Mesha), 2 (Dibon), 8 (Medeba), 9 (Baal-meon), 10 (Kiriathaim), 19 (Jahaz), Mesad Hashavyahu 7 (Hoshaiah): [equivalent] → [cognate]; Sinuhe B29 Qedem and Kpny (= Byblos `גְּבַל`) → [cognate]; no `>` line changed (ʿAjrud's Teman ↔ Deut 33:2 stays [equivalent]: other names)	run 4's question; one rule for every corpus from now on
7	pWestcar 2,22 and the bracket notation of the dossier's WC / the corpus's WE	the Egyptian corpus's rule in both files: `ר֯` is not carried into the Hebrew; a half-restored word is bracketed whole, a restored ending is not bracketed; 2,22 = וזהב־לבן; **אוליד**? … [שלח] שליח […]. [ואז] [תפס] [תמסח]	the 27 lines of WC = WE 2,21–4,7 (identical in both files, `verify WE`)	run 6: the Westcar translator had spread the dossier's `ר֯` over WE, and the reviewer removed it from 25 lines; one notation for both files, the corpus's

#	Source word	Hebrew (binding)	Lines changed (corpus · label)	Reason
8	the dossier's Illuyanka excerpt (IL = KBo 3.7 i 9–20)	the myth corpus's four revisions (renderings §H8): וְאֵל הַסְּעָרָה – אֶת כָּל הָאֵלִים (vocalized), ואינָרָה [ל]זִיגָּרָתָה, וערכה הכול לָרֹב: (*ḫandai-* ערך, *mekki* לרב), דוד … – ובדודים ({DUG}*palḫi-*)	the dossier's annotated-IL.rtl.md; the §H8 rows deleted	the corpus renderings of the whole myth corpus; verify IL keeps the two identical

Rows 3–5 and 8 are the Hittite tool and dossier batch; rows 1, 2, 6, 7 the other batch (section C).

B. Kept, with the reason (record, no change)

- **Av. *dā-*** (the verb) by sense; ***spəṇta*** נָדִיב beside Skt *suvidátra* נדיב, and ***páyas*** לָשָׁד beside *médha* in the fixed לָשָׁד הַזָּבַח: not cognates, by sense inside the corpus (renderings §11.8).
- ***kāma*** חֵשֶׁק = Hesiod's ἔρος, ***amṛ́ta*** אלמוות (plene, as Hesiod), מָרְחָב for *rájas* (Vedic) and πέλαγος
  (Greek), נָחָשׁ for *áhi* / *aži* / *sarpá* (the dossier's comparison word for every culture's serpent): aligned on
  purpose, or cross-language (principle 1).
- **SISKUR** (Hittite "ritual; offering"): טֶקֶס in the rituals and for EN SISKUR אדון הטקס (Zalpa / Appu), מִנְחָה
  in Ḫedammu, where it is the gods' offerings from mankind (Ea's speech: killing mankind would starve the gods, ↔ Gen
  8:20–22). The Sumerogram is wider than either Hebrew word; by sense, recorded at its lines (renderings M3).
- **Hitt. *ḫarnink-***: הִשְׁמִיד in the myths, הִשְׁחִית in the Laws (HL2 107.2 and the others) and the Instructions.
  In the myths הִשְׁחִית would manufacture Gen 6:13 (מַשְׁחִיתָם) in Ea's speech about killing mankind; in the Laws
  the object is property (a vineyard; Jer 12:10 שִׁחֲתוּ כַרְמִי is a real, harmless match). By text, with the reason.

- **Hitt. *ḫenkan*** המוות (Zalpa) / מגפה (the rituals, beside ÚŠ); ***waḫnu-*** סובב (the Song of Emergence) /
  המיר (the Instructions, Lev 27:10); ***ḫarp-*** נפרד / הצטרף; ***šarra-*** חלק / חצה; ***maz(z)-***; שָׂלִיחַ for ṬĒMU and *ḫalugatalla-*; שִׁגֵּר for *peya-* and *uiya-*; קֶרֶן for SI and *kalmara-* (ray): common
  verbs and nouns whose Hittite range covers both Hebrew senses; by sense (renderings M3).
- **חָרוֹן** (Hitt. *karpi-*) beside Gilgameš's *libbātu*; **הִשְׁמִיד** beside the Sumerian *ḫalam*; **גִּבּוֹר** for Ug. *ġzr* beside the myths' gate on UR.SAG: different languages (principle 1).
- **Ugaritic and Punic:** *mšr* מֵישָׁרִים = Akk. *mīšarum*, קְשֹׁט, נָשָׁר, יְתוֹם / אַלְמָנָה, Punic ʾlm הָאֵלִים (= Ug. *ilm*), ʾlp בָּקָר (= Ug. *alp*; אֲלָפִים Ps 8:8 in the apparatus of both): consistent across
  the languages. *t̲ʿ* הגשה and *dbḥ* / *šlmm* שלמים / זבח against the Hittite SISKUR: different languages.
- **Aramaic *ʿdy*** (Sefire, not yet translated): the run that does Sefire starts from EST's *adê* אֲמָנָה (the same
  word – a loan between the two – so principle 3), with עֵדוּת / עֵדֻת in the apparatus, unless it finds a reason in
  the text; it records its choice.
- ***šâlu*** שָׁאַל [cognate] (the Cuthaean Legend's oracle questions, the laws, Gilgameš) and ***erēšu*** "request"
  שָׁאַל (Gilgameš VI 71, 103, XI 213, the Descent of Ištar 102, Nergal, Erra I 6, Counsels, the Dialogue of Pessimism,
  Etana, SAA 9) – also בִּקֵּשׁ in Etana, Ištar 118b, Enūma eliš, MAL A, by sense: Hebrew שָׁאַל itself means "ask"
  and "request" (1 Kgs 3:5 שְׁאַל מָה אֶתֵּן לָךְ), and the Descent of Ištar's figura שאלת ... שאלה אשר לא תישאל is a
  fixed passage; the [cognate] tag goes to *šâlu* only, *erēšu* lines are [equivalent]. Moving *erēšu* would touch ~15
  established lines in eight corpora for no gain in the comparison.
- ***gimillu*** חֲמָלָה (the Cuthaean SB) beside Erra's *gamālu* חָמַל (one root in both languages) and the formula
  gimilla turru הֲשִׁיב גְּמוּל (Enūma eliš, Gilgameš): a formula wins; גָּמַל stays *riābu*'s.
- **The palm:** Akk. *gišimmaru* תָּמָר (the Cuthaean SB 136, Maqlû I 22, the Theodicy 56, the Poplar d+17 – consistent),
  Sum. *ĝišimmar* דֶּקֶל (EWO 241 beside *zulum* תמרים, Lipit-Ištar), the fables' contestant דֶּקֶל: kept – the
  Sumerian lines have the fruit beside the tree, where תמרים / תמר would merge them.
- ***ešertu*** בֵּית־אֵל (מִקְדָּשׁ is gated to *eš₃*); ***šapru*** שָׁלִיחַ = *mār šipri*'s (both "envoy");
  gipāru אחו / מרעה / מכלאה by sense; ***ḫazannu*** חַזָּן [cognate] (the note gives "mayor").

- **The Egyptian tales' kept splits** (renderings §11): wsr / ḥmw משוט, qd.w / dbḥ מידה, dmj עיר / עיירה,
  jdr / jꜣw.t עדר, ꜥfd.t / pds ארגז (and the Hittite *tuppa-* ארגז, another language); y~mꜥ ים [cognate] in the
  Two Brothers beside the Ugaritic Yam יָם (a name there): the same Semitic word, a note in both.

C. Applied

Applied 2026-11-02 in two batches at once, on independent files (range B, two agents; Opus), each told to apply every
row to every line that carries the word:

- **Batch H** (rows 3–5, 8, and Ḫedammu into the fifth-day dossier): the Hittite tool, the myth corpus, the dossier's
  IL and the new HD excerpt.
- **Batch E** (rows 1, 2, 6, 7): the Vedic corpus, the Cuthaean Legend, Hammurabi, the inscriptions corpus, Westcar
  (WE and the dossier's WC).

Every touched corpus was rebuilt and its verifier passed with `--strict`; then every verifier of the folder and
`check_bible_quotes.py` over all its `.md` files (`reports/round-5/final.md`). The lines each batch changed are listed
in the "2026-11-02 harmonization" line of each touched corpus's `renderings.md`.
