AED-TEI – the Egyptian texts of the TLA (snapshot 2018) in TEI

- **What:** S. D. Schweitzer, *AED-TEI: Corpus of Egyptian Texts for the AED – Ancient Egyptian Dictionary* (2019), a TEI
  conversion of the Thesaurus Linguae Aegyptiae database snapshot of January 2018 ("Teilauszug der Datenbank des Vorhabens
  Strukturen und Transformationen des Wortschatzes der ägyptischen Sprache", urn:nbn:de:kobv:b4-opus4-29190): about 11,400
  Egyptian texts, each in four files – the lemmatized transliteration (`<ID>.xml`), the German sentence translations
  (`<ID>_st.xml`), the German word translations in context (`<ID>_wt.xml`) and the hieroglyphs (`<ID>_hiero.xml`; not
  downloaded).
- **URL:** https://github.com/simondschweitzer/aed-tei (files through `https://raw.githubusercontent.com/simondschweitzer/aed-tei/master/files/<ID>.xml`, `<ID>_st.xml`, `<ID>_wt.xml`; the
  concordance of names and IDs: `concordance_name_text_id.csv`); the whole corpus: Zenodo 10.5281/zenodo.3580939 (177 MB
  zip; **zenodo.org was unreachable from the cloud on 2026-10-23**, and raw GitHub was enough). `dictionary.xml` (the
  lemma list) is **not** in the GitHub repository (only in the Zenodo zip): the corpus tools use the TLA lemma ids and
  the `_wt` glosses instead (`egypt_tools.py lemma`).
- **Licence: CC BY-SA 4.0** (stated in every file header) – committed, with attribution. **Never scrape the live TLA
  website** (`thesaurus-linguae-aegyptiae.de`): it sits behind a JavaScript wall and shows crawlers a decoy page of fake
  records (the Egypt survey, 2026-10-21).
- **Retrieved:** 2026-10-23 (Round 4 run 1 for Merikare; Round 4 run 3 for the rest).
- **What is here** (one folder per text; the TLA ID in the file names):

- **Line numbering:** the <lb n="[…]"/> of each manuscript (page.line for papyri; columns for the Cow; the wall,
  register and line for the Pyramid Texts, e.g. [P/V/W 34 = 663], which the corpus tool shortens to P/V/W.34).
- **Markup:** see ../../tools/aed2md.py ([ ] lost, ( ) defective writing, ⟨ ⟩ omitted, { } superfluous, ⌜ ⌝ damaged). In Amenemope, the TLA's <gap/> between two analyses of one written word is not a loss.

- **Usefulness:** high: a lemmatized, morphologically tagged transliteration with damage marks. The German translations
  are the TLA's (rank 3) – read them only after drafting (`egypt_tools.py tr`).
