Binding for every text of the corpus (guidelines §6.6). Fixed by the coordinator of Round 5 run 1 (2026-10-30) before the
first line; the translators propose additions and changes in their `project.md` sections ("Proposals"), and the
coordinator merges them here (§11). The verifier (`vedic_tools.py verify`) reads §3.1 (names) and §8 (formulas) from this
file; the reserved words and traps (§5, §7) are in the tool (`vedic_tools.py gates` prints them).

1. The texts and the bases

KEY	Text	Base (our line data: `vedic_tools.py data KEY`)	Line unit
RV…	the Rigveda hymns	VedaWeb, the Zurich text with its human-made morphology (CC BY 4.0; committed TSVs)	the pāda (`1a`)
SB1.8.1, SB1.2.3	Śatapatha Brāhmaṇa (Mādhyandina) 1.8.1.1–10; 1.2.3.6–9	TITUS (Weber 1855, accented; TITUS forbids republication: local TSV)	kaṇḍikā + TITUS sentence (`1a`, `1b`)
MBH3.185	Mahābhārata 3.185 (Matsya)	GRETIL (the BORI critical text; local TSV)	the half-śloka (`1a`, `1c`, `17e`); a bare number = the speaker line
VD2	Vīdēvdād 2 (Yima)	CAB, the basis edition's linguistic corpus (= Geldner's numbering; local TSV)	the stanza (`1`…`43`)
AB7	Aitareya Brāhmaṇa 7.13–18 (Śunaḥśepa)	TITUS (Aufrecht 1879; local TSV)	the TITUS line inside a sentence (`13.1a`) – prose lines and the gāthās' half-verses
KU1	Kaṭha Upaniṣad, adhyāya 1 (vallīs 1–3)	GRETIL TEI (CC BY-NC-SA; committed TSV)	the half-verse (`1.1a` = vallī 1, verse 1, first half)

- The **TITUS texts are written without word division** where Weber and Aufrecht print Devanāgarī-style sandhi
  (`avanégyamudakamājahruryáthedám`): the `פירוק` divides the words. The edition's abbreviation dots (`...`, ŚB 1.2.3.6)
  stand for repeated phrases: the Hebrew expands them in `( )`.
- **The CAB text** separates words by dots (`yimō. srīrō.`), marks emendations with `+`, and keeps the long repeated
  blocks of Vd 2 in full (unlike its "without repetitions" label).

- RV 1.32 is **aligned with the fifth-day dossier** (`../מיתוסים-אוגריתיים/3-תיק-היום-החמישי/annotated-RV.rtl.md`, stanzas 1, 2, 4, 5, 8, 11): `verify` requires the same Hebrew in both files for those pādas; a revision is made in both files at once (§9).

2. Hebrew conventions

2.1 The line

- **One pāda = one Hebrew line** (RV, MBh's half-ślokas, the Kaṭha's half-verses, the gāthās of AB); the sentence runs over the line ends as in the source. The prose units (ŚB, AB, Vd) are one Hebrew line each, however long.
- **Speech:** the Brāhmaṇas and the Avesta mark speech by `iti` at its end; the Hebrew opens it with a colon and closes it with a quotation mark only where needed for sense (`אמר: "..."`), and never translates `iti` as a word.
- Sanskrit particles: `ha`, `vai`, `vā́u` (narrative emphasis in the Brāhmaṇas) are not translated (the פירוק says so); `íti` closes speech; `iva` / `ná` (after a noun) = `כְּמוֹ` / `כְּ־`; `kíla` = `בֶּאֱמֶת`; `nú` = `עַתָּה`.

2.2 Sanskrit and Avestan in the Hebrew apparatus

In the apparatus, Sanskrit and Avestan words are written in Latin transliteration in italics or backticks (**`rétas`**, `` `vṛtrám` ``), never in Hebrew letters (the names excepted).

2.3 Transcription of names into Hebrew (for names not in §3)

- Consonants: k `ק`, kh `ק` (with a note), g `ג`, gh `ג`, c `צ׳`, ch `צ׳`, j `ג׳`, jh `ג׳`, ṭ / t `ט`, ṭh / th `ת`, ḍ / d `ד`, ḍh / dh `ד`, ṇ / n `נ`, p `פ`, ph `פ`, b `ב`, bh `ב`, m `מ`, y `י`, r `ר`, l `ל`, v `וו`) `ו` inside a word where it could be read as a vowel), ś / ṣ `ש`, s `ס`, h `ה`, ṃ / ṁ `מ`, ḥ `ה` (or dropped at the word end). Avestan: θ `ת`, δ `ד`, γ `ג`, x `ח`, x^v `חוו`, š / ṣ̌ `ש`, ž `ז`, ŋ `נ`, β `ב`, f `פ`, z `ז`.
- Vowels: final -a (`וְרוּנָה` ,`אִינְדְרָה`) `ָה`, medial ā `א` where it helps (`נָאר֫דָה`), i / ī `י`, u / ū `ו`, e `ֶ`, o `ִו`, ai `ֵי`, au `אָו`, ṛ (`וְרְטְרָה`) `ְר`.
- **Vocalize every name at its first occurrence in each file** (the verifier checks the names of §3.1), and the names of §7 at every occurrence.

3. Names (binding; checked by script: where the source regex matches the folded line, the Hebrew must be in it)

The regex is matched on the **folded** source (`vedic_tools.py fold`: lower case, no accents or diacritics, ś/ṣ/š = s, ṛ = r, θ = th, ə = e, spaces around words). A name used as a common noun in another text (Agni = fire, Mitra =

friend, Vṛtra = obstacle) is written here only for the texts where it is a name (§3.2 says how the common noun is
rendered).

3.2 Common nouns that are names elsewhere

- *agní* outside the RV (ŚB, AB, KU, MBh): אֵש (the fire), and אַגְנִי only where the text speaks of the god.
- *sūŕya* שָׁמֶשׁ (the RV's Sun is both; one Hebrew), *uṣás* שַׁחַר (the dossier), *dyú / dyáus* שָׁמַיִם (Father Sky in 10.10 and 1.32: שָׁמַיִם, a name without the article where personified), *pr̥thivī́* אֶרֶץ, *dyāvāpr̥thivī́* שָׁמַיִם וָאֶרֶץ, *vā́ta / vāyú* (5.2§) רוּחַ.
- *mitrá* as a common noun "ally, friend" (10.34) = רֵעַ (vocalized).
- *Ka* "Who?" (10.121's refrain, read as a god's name in the Brāhmaṇas): the question לְאֵיזֶה אֵל; the god Ka only in
  the apparatus.

4. Grammar mapping (Vedic Sanskrit → Hebrew)

- **Imperfect, aorist and perfect of narrative → Hebrew past** (no vav-consecutive). The **injunctive** (the augmentless
  form: vocam, 1.32.1a) has no tense of its own: past or present by context, with a note. The **perfect** of a state
  (véda "knows") → present. The **present** → present or habitual.
- **Subjunctive, optative, imperative → future, wish (נָא, יְהִי), command.** The Brāhmaṇas' optative of rule
  (juhuyāt "he should offer") → יַקְרִיב-type future with the sense of a rule.
- **Participles** → Hebrew participles; the **absolutive** (-tvā, -ya: "having done") → a subordinate clause (אחרי ש..., ב...) or a coordinated past; **infinitives** → the Hebrew infinitive.

- **Middle voice** → reflexive only where it is reflexive; the **passive** (-ya-, the past participle in -ta) → נפעל /
  פָּעַל.
- **Causatives** (-aya-) → פיעל / הפעיל by function (*janáya-* הוֹלִיד, *pāraya-* הֶעֱבִיר).
- **The dual** → שְׁנֵי / the Hebrew dual where natural (the twins, Heaven-and-Earth).
- **Cases:** instrumental עַל יְדֵי / בְּ־; dative לְ־; ablative מִ־; locative עַל / בְּ־; genitive שֶׁל or
  the construct.
- **Compounds:** a bahuvrīhi ("having X") → בַּעַל X / לוֹ אֲשֶׁ־, a tatpuruṣa → the construct; with a note on the
  compound in the פירוק.
- **Avestan** (Young Avestan of the Vīdēvdād) by the same rules; its *āaṯ* "then" אָז, the question formula pərəsaṯ … ahurəm mazdąm (§8), and its dual / ablative as in Sanskrit.

5. Key terms (one source lemma = one Hebrew word; tags in the apparatus)

5.0 Echo control in a corpus that never met Israel

The Vedic and Avestan texts had **no contact with Israel** (Iran's contact with Judah came centuries after these texts
took shape, and the Vīdēvdād's written form is late: the note says so where it matters). Every parallel is a shared
motif, not a source: the apparatus says so in words (guidelines §1, §6.4). The cross-language principles of guidelines
§6.7 (2026-10-30) apply: the Akkadian corpora's cognate reservations (עָבַר *ebēru*, לָקַח *leqû*, קָרָא, נָשָׂא, שָׂם …) **do not apply** here; the natural Hebrew by sense, [equivalent]. What is reserved here is the vocabulary of
the Bible passages the corpus is compared with (Gen 1–3, 6–9, 22; Lev 18): **§5.1–§5.2 and the tool's RESERVED list**.

8. Formulas (fixed; checked by script: | F | folded-source regex | Hebrew regex | lines |)

F	Source (folded regex)	Hebrew (regex on the unvocalized line)	Lines
F1	kasmai devaya havisa vidhema	לאיזה אל נכבד במנחה	RV 10.121.1–9 (the refrain: "To which god shall we do honour with an oblation?")

F5	sa hovaca	אמר	ŚB, AB: "he said"

9. Repeated lines and the dossier

- Identical folded source lines get identical Hebrew (verify lists every difference: justify or fix). Vd 2's three
  enlargements of the earth (2.8–11, 12–15, 16–19) and its command / execution pairs (2.25 ↔ 2.33 …) are the corpus's
  great repetitions: the later copy copies the first copy's Hebrew and changes exactly what the Avestan changes.

- **RV 1.32 and the fifth-day dossier:** `data RV1.32` shows the dossier's Hebrew for its 24 pādas. Copy it; revise only
  with a reason, and record the revision in your section of the project (the coordinator applies it to the dossier, so
  the two stay identical).

10. Self-test lines (`vedic_tools.py selftest`: | KEY label | expect | Hebrew |)

11. Merged from the translators (numbered by part; the coordinator)

11.1 RV 10.129, 10.121, 10.72, 10.190 (translator 1; merged 2026-10-30)

- Confirmed in real lines: every pre-set row of §5.1 it met. New (binding from now on): *a-vātá* בלי רוח (the wind
  stays visible; `vedic_tools` now licenses רוח by *avāta*); *praketá* סימן (אות reserved by sense: Gen 1:14), *apraketá* חסר־סימן; *amŕ̥ta* אלמוות (plene, as Hesiod); *ābhú* הַנִּהְיָה; *bándhu* קרוב / קרבה; *raśmí* מיתר; *sám √vr̥t* התהווה (the formula *sám avartata ágre* התהווה בתחילה); *√an* נשם; *visárjana* שילוח; *páti* אדון; *√dhr̥* החזיק; *√stambh* תמך; *√dr̥ṃh* מוצק; *dhárman* יסוד; *nā́ka* הכיפה; *ásu* חִיוּת; *dákṣa* (common noun) כשרון; *yugá* עידן; *āśā́* פאות; *uttānápad* פשוקת־הרגליים; *bhū́* אדמה; *sám √dham* נפח, *karmā́ra* נַפָּח (the natural smith's verb, tagged against Gen 2:7); *reṇú* אבק; *√klp* caus.

- **Rulings:** *dhātár* = הַמַּעֲמִיד (accepted: סָדָר is *ṛtá*'s, and √*dhā* = העמיד keeps the root); *yathāpūrvám* (10.190.3b) = זה אחר זה (?) by the RV dictionaries (accepted; "as before", the later cyclic reading, in
  the apparatus; an open question for the user); *loká* = עוֹלָם, so that *rájas* keeps מָרְחָב alone.
- Tool fixes (2026-10-30): the Himavat regex no longer matches the adjective *himávant* "snowy"; the עולה gate blocks
  only the cult forms (העולה, עולות, לעולה), not the participle "rising".

11.2 RV 10.90, RV 1.32 (translator 1, part 2; merged 2026-10-30)

The dossier's 1.32 revised in 5a and 5d (both files identical: verify RV1.32).
- Tool fixes: the עפר licence no longer includes *reṇú* (אבק); the כפר gate allows the simile "like a bull / cow"
  where the source has *iva* / *ná* with a cattle word.

11.3 The flood: ŚB 1.8.1, MBh 3.185, Vd 2 (translator 2; merged 2026-10-30)

- F4 fixed: אֲהוּרָה מַזְדָה, הרוח הנדיבה ביותר, עושה בעלי החיים בעלי העצמות, נאמן הסדר! (*dātar* מעמיד → עושה 11.9§ ,2026-11-02); F4b the short address

- Tool fixes: the חי, טוב, רוח licences widened (*vāta* in compounds, the vocative *sādho*, CAB's *gaiia*); the

- *nár* אנשים in VD2 41 (a pair of man and woman); *zam* ארץ (and אדמה as material, VD2 31) against RV *kṣám*
  תבל (+ VD2 8); Av. *dā-* עושה (by sense; *dātar* = מעמיד since 2026-11-02, §11.9) beside Skt *dhātár* הַמַּעֲמִיד, Av. *maṣ̌ïia* (5.3§) אדם against

- One Hebrew for several near-synonyms (kept, not reserved words): מים (*āṕas*, *ámbhas*, *udaka*, *jala*, epic *salila*), ים (*samudrá*, *sāgara*), גיבור (*vīrá*, *śūŕa*), אישה (*strī̃*, *nā́rī*, *yóṣit*, *jāyā́*), טוב־לב (*sumánas*, MBh's vocative *sādho*, *suhŕ̥daya-*).
- נָחָשׁ for *sarpá* (RV 10.16.6b): the tool licenses it and the entry says so; §7.2 now names it.

Bible-comparison lines (the key parallels of the six projects, ~55 lines): every tag fits the Hebrew of its line; no false echo found (חרב / סכין, כפת, ספינה, שטף, זבח, נסך keep Gen 6–9 and 22's words out of the lines), and the real hidden echoes are written and tagged (חושך, רוח, זרע, אדמה RV 10.18.10a, אדם RV 10.90, גיבן Vd 2.29, חורף Vd 2.22). No line of the RV 1.32 dossier excerpt changed.

Open (for the user):

- Av. *dā-* / *dātar* against Skt *dhā* / *dhātár*: the cognate rule (*aša* = *r̥tá*) would give מעמיד, but F4's עושה follows the Avestan sense "create"; kept, open. **Settled 2026-11-02** (§11.9): *dātar* = מעמיד.
- עושה was then both Av. *dātar* and √*kr̥* / Av. *kar-* (עשה; settled 2026-11-02: *dātar* מעמיד); נדיב both *spəṇta* and *suvidátra*; לשד both *páyas* and *médha*'s head word – each recorded, none a reserved word.
- RV 10.10.13d / 14b (the one repeated-line difference verify lists: יחבק / תחבק) is justified by the change of subject.

11.9 2026-11-02 harmonization (the Round 5 finalization; the lead's decision)

2026-11-02 harmonization (the Round 5 finalization): Av. *dātar* (Ahura Mazdā's epithet) = מַעֲמִיד – the Hebrew of its Sanskrit cognate *dhātár* הַמַּעֲמִיד (RV 10.190.3; RV 10.18), by the cousin-cognate principle (*aša* = *r̥tá* סדר; guidelines §6.7, 2026-10-30, principle 3), and because עושה also renders Av. *kar-* / √*kr̥* in the same text (שעשה יְיָמָה), which hid that the Avestan uses two verbs. Meaning: "establisher, creator". The verb *dā-* itself stays by sense (*daδuuā°* העושה, Vd 2.20–21; *dātō* "I was made"). Changed: F4 → אֲהוּרָה מַזְדָּה, הרוח הנדיבה ביותר, מעמיד בעלי החיים בעלי העצמות, נאמן הסדר, F4b → (8§) מעמיד בעלי החיים בעלי העצמות, נאמן הסדר; Vd 2.1, 2.39, 2.42, 2.43 (מעמיד בעלי החיים → עושה בעלי החיים, with their glosses and the note of 2.1). The open item of §11.8 is settled.
