Brief for the translators of Round 3, run 4 (the Šamaš Hymn, Counsels of Wisdom, the Dialogue of Pessimism, Šuruppag)

▼ Contents

1. The run 1
2. Read first 2
3. Tools (in this folder; run with `python3 -I`) 2
4. The ★ rules, again 3
5. Lines shared between the four texts (fixed now, identical Hebrew; see also `renderings.md` §11.8 – the nets, pits and other words shared with Etana) 4
6. Your final message (short) 4

This adds to `translator-brief.md` (read it in full: it is binding). Where the two differ, this file wins.

1. The run

Four texts of the wisdom corpus are translated by six translators **one after the other** (guidelines §5.1, since 2026-10-22: quotas apply in the cloud too; order SH-a, SH-b, CW, DP, SU-a, SU-b – `renderings.md` §11.9). Two texts are long and are drafted by two translators (the second continues the first's file):

Key	Text	Base	Translator(s)
SH	the Great Prayer to Šamaš (200 lines)	eBL `../sources/eBL/Shamash-Hymn-SB/`	SH-a: 1–100; SH-b: 101–200
CW	Counsels of Wisdom (159 labels)	eBL `../sources/eBL/Counsels-of-Wisdom-SB/`	one translator
DP	the Dialogue of Pessimism (93 labels)	eBL `../sources/eBL/Dialogue-of-Pessimism-SB/`	one translator
SU	the Instructions of Šuruppag (288 labels, Sumerian)	ETCSL `../sources/ETCSL/5.6.1--Instructions-of-Shuruppag/`	SU-a: 1–142; SU-b: 143–280

Safeguards (binding): write each drafted section to disk at once (a quota stop must lose at most the section in progress); edit only your own files (your `annotated-<KEY>.rtl.md`, your `translation--intro-<KEY>.rtl.md`, your section of your project's `project.md`, and the generated files through `build`). Never edit `renderings.md`, another translator's files, the tools, other corpora or `sources/`. Read the earlier translators' files through `wisdom_tools.py grep` / `lemma`; copy their Hebrew for the shared lines (§5). Never commit, never start sub-agents. Run every command with a short runtime (`python3 -I`).

2. Read first

1. `../translation-guidelines.md` – the whole file. The ★ rules of §5.2 bind every line (below, §4).
2. `corpus.md`; `renderings.md` – all of it, and **§11 (this run) closely**; `translator-brief.md`; your project's `project.md`.
3. Models: the first 120 lines of `התאודיציה-הבבלית-2/annotated-Th1.rtl.md` (format, apparatus density); for SU also the flood corpus's Šuruppag 1–13 (`../-סיפורי-המבול-המסופוטמיים/6-אזכורי-המבול/annotated.rtl.md` §2) and 80 lines of `../קולות-היום-יום/2-משלים-שומריים/annotated-c1-1.rtl.md` (the Sumerian proverbs, the closest Sumerian model) with `../קולות-היום-יום/renderings.md`.

3. Tools (in this folder; run with `python3 -I`)

- `wisdom_tools.py pars <KEY>` – before drafting: eBL's parallel lines and identical normalizations, with the Hebrew already given.
- `wisdom_tools.py sux SU` – (Šuruppag) every line identical or similar to a Sumerian line already translated (the flood corpus, the proverbs), and the repeated lines inside the text.
- `wisdom_tools.py lemma '<regex>'` / `grep '<Hebrew regex>' [--gilg]` – how a lemma was rendered so far; where a Hebrew string is used. **Grep before fixing any new Hebrew word for a recurring lemma** (★).
- Other corpora: `python3 -I ../קולות-היום-יום/kol_tools.py lookup '<regex>'` (how the earlier corpora rendered a word), `python3 -I ../העולם-התחתון/netherworld_tools.py grep all '<regex>'` (the `>` lines of every corpus).
- `../tools/sumerian_workbench.py line ../sources/ETCSL/5.6.1--Instructions-of-Shuruppag/c.5.6.1.xml FROM-TO` – (SU) ETCSL lemmas + the ORACC morphology of each verb; `... morph '<form>'`, `... conc '<regex>'`, `... gloss '<regex>'`.
- **`wisdom_tools.py fill <KEY>`** – write every source line as `` `@` `` and let `fill` copy the base text (eBL's first N, or ETCSL's line). `verify` checks that each source line equals the base exactly.
- `wisdom_tools.py verify <KEY> [--strict]`, `wisdom_tools.py build` (builds every file of the corpus; harmless to the others).
- `../tools/check_bible_quotes.py <files...>`; `--show <book> "<ch> <v>"` prints a verse. **The repository numbers the Decalogue Ex 20:1–13 and Deut 5:6–18** (כַּבֵּד אֶת אָבִיךָ is שמות כ:יב; לֹא תַחְמֹד is כ:יג; לֹא תִרְצָח ... לֹא תִגְנֹב is כ:יא): print every verse before quoting it.

- Web: you should not need it. If you do, at most 10 `WebSearch` calls (the session shares a budget); verify by fetching.

4. The ★ rules, again

- Draft **unvocalized and plene** from the first line; vocalize only names at their first occurrence, ambiguous words, archaic forms and the always-vocalized words (`renderings.md` §1–§3, §10, **§11.6**).
- Source lines as `` `@` `` + `fill`.
- Print every Bible verse before quoting it (notes too); write quotations as `` `…` (ספר פרק:פסוק) ``; run `check_bible_quotes.py`.
- Reserved words (§8 and **§11.6**): checked by `verify`. If a gate fires on a legitimate lemma variant, report it in your final message; do not bend the Hebrew.
- Fix the Hebrew of every formula and refrain before drafting it (§11 gives them), and check the pre-set formula against the transliteration of its first occurrence (★: it may be wrong – then say why, and keep it consistent).
- Grep earlier files before fixing a new Hebrew word.
- **The rank-3 translation is the main source of false echoes**: Foster's and ETCSL's English is consulted after your own reading; every place where it manufactures or hides a Bible parallel is a finding for the parallels index.
- Read the transliteration before believing any brief, this one included: "look for", never "translate as".
- Before you finish, diff the renderings you fixed at your first occurrences against your drafted lines (★).

5. Lines shared between the four texts (fixed now, identical Hebrew; see also `renderings.md` §11.8 – the nets, pits and other words shared with Etana)

Source	Hebrew	Where
ṭāb eli šamaš balāṭa uttar	טוֹב עַל שֶׁמֶשׁ, חַיִּים יוֹסִיף. (SH: שֶׁמֶשׁ always vocalized)	SH 100, 106, 119
niqû balāṭa uttar	הזבח חיים יוסיף,	CW A+87
ul ṭāb eli šamaš irâbšu lumna / *ṭāb eli šamaš irâbšu dumqa*	לא טוב על שֶׁמֶשׁ, יגמלנו רַע. / טוב על שמש, יגמלנו חסד.	CW A+11, A+15
našû īnī (ana)	נשא עיניים (אל)	SH 88, CW A+37
usātu, *ēpiš usāti*, *bēl usāti*	עזרה, עושה עזרה, בעל עזרה	DP 71–78, SH 122, CW A+16
ikkibu + god	תועבת + god	CW 49–50, A+59, A+103
suppû (u) sullû (u) labān appi	תחינה, תחנונים וליטוף אף (fix the order to the Akkadian)	SH 130–131 (with more words), CW A+82
kitmusu (*kamāsu* Gt)	כרע (Gt: כורעים)	SH 15, 51, 55, 56, 131, 163
ina iḫzīkā-ma amur ina ṭuppi	בלימודך – ראה בלוח:	CW A+63, A+85, A+98

The SH-a translator fixes 100 and 106 (SH-b copies them at 119); the CW translator fixes A+11 and A+15 with the table's Hebrew. If the Akkadian of a line differs from the table, change exactly what differs and say so.

6. Your final message (short)

Lines done (and the placeholder if you stopped), the main decisions, the strongest parallels, the strongest "ancient mind" findings, open decisions, and any problem with a tool or a gate.
