4. History 5
5. STATUS / plan 5
6. Limits 6
7. Report 7

Kept up to date by the run-7 coordinator; the lead merges it into the shared files (common brief §5). Final state: all three projects drafted, reviewed (three passes each), verified and built.

1. Sources

For `sources-registry.md` §4 (all READMEs committed):

- **`ORACC/akklove--Akkadian-Love-Literature/`** – ORACC **AkkLove**, "Akkadian Love Literature" (N. Wasserman et al., based on Wasserman 2016 = LAOS 4): the 25 OB / Old Akkadian love texts (LAOS 4 01–07, 10, 13, 14a–f, 15–18, 20, 22–26), each as `LAOS4-NN--<id>--lemmatised.md` (transliteration, Wasserman's normalization, lemmas; `tools/cdl2md.py --norm`) and `...--translation.md` (Wasserman's English, line by line; `tools/oracc_html2tr.py`), with `texts.tsv` (the catalogue). **CC0.** Base of `קולות-היום-יום/1-שירי-אהבה/`. The Middle Babylonian / Middle Assyrian texts of the project (LAOS 4 08, 09, 11, 12, 19, 21) are in the zip but were not converted (outside "OB"; a later run). The Isin incantations (LAOS 4 27–34) are not in the export.
- **`ETCSL/6.1.01--Proverbs-Collection-1/`**, **`ETCSL/6.1.02--Proverbs-Collection-2-6/`**, **`ETCSL/6.1.03--Proverbs-Collection-3/`** – the composite (c-file) and ETCSL's translation (t-file), with `transliteration.md` / `translation.md` (`tools/etcsl2md.py`); **CC BY-NC-SA**, committed; with **`ORACC/epsd2-literary--Q000795--Proverbs-Collection-1/`**, **`...Q000796...`**, **`...Q000797...`** (`Qxxxxxx--lemmatised-morph.md`: lemma + morph of every word; CC0). Base of `משלים--2-שומריים/`. Alster 1997 and Gordon 1959 are © (records only: not owned).

- **ETCSL/5.5.1--Message-of-Ludigira-to-his-mother/** and the literary letters **ETCSL/3.3.01--Letter-Ur-saga-to-a-king/**, **3.3.06--Letter-Aba-tah-lugalga-to-his-brothers/**, **3.3.07--Letter-Ugubi-to-his-mother/**, **3.3.08--Letter-Shamash-tab-to-Ilak-niid/**, **3.3.10--Letter-Inanaka-to-Nintinuga/**, **3.3.11--Letter-Inim-Inana-to-Enlil-massu/**, **3.3.12--Letter-Inim-Inana-to-Lugal-ibila/**, **3.3.20--Letter-Gudea-to-his-personal-deity/** (c + t files and their Markdown), with **ORACC/epsd2-literary--Q000775**, **Q000573**, **Q000578**, **Q000579**, **Q000580**, **Q000582**, **Q000583**, **Q000584**, **Q000592** (lemma + morph). Base of 3-מכתבים/. CC BY-NC-SA / CC0, committed.

Nested .gitignore: sources/ORACC/akklove--Akkadian-Love-Literature/.gitignore (*.zip, *.html, *.json: the raw zip and the per-text HTML views; the converted Markdown is committed, CC0).

Recipe rows for sources/fetch-recipes.tsv (the built-in ORACC rule covers only ORACC/_bulk/*.zip; tab-separated, in its format):

```
ORACC/akklove--Akkadian-Love-Literature/akklove.zip  url      work     https://o
ORACC/akklove--Akkadian-Love-Literature/LAOS4-01--P392087.html          url
```

and the same .../LAOS4-NN--<id>.html url work https://oracc.museum.upenn.edu/akklove/<id>/html row for the other 24 HTML files: LAOS4-02--P251898, 03--P254179, 04--P252226, 05--P251711, 06--P424004, 07--X001001, 10--X001003, 13--X001006, 14a--X001007, 14b--X001008, 14c--X001009, 14d--X001010, 14e--X001011, 14f--X001012, 15--P305850, 16--X001013, 17--P429343, 18--P252332, 20--P252006, 22--P285640, 23--P252071, 24--P274691, 25--P305832, 26--P296059. Then python3 -I tools/sources_sync.py snapshot.

Access notes (§4.6): ORACC has a project **akklove** (CC0) with Wasserman's translations in the per-text HTML view (the zip has none); the ORACC certificate workaround of tools/certs/ worked for the zip and the 25 HTML pages. **CDLI** (cdli.earth) answered HTTP 503 all day (2026-10-21), so the OB Akkadian private letters (AbB) could not be taken from it; Archibab (www.archibab.fr) is not on the allowlist (not tried beyond the proxy refusal). No new hosts for domains.txt beyond what is there (if the user wants AbB letters from Archibab: www.archibab.fr).

2. Tools

For tools.md (corpus tools, in קולות-היום-יום/):

- **kol_tools.py** (the corpus tool; config `UNITS` = one entry per text, by project): `units`; `data UNIT [FROM [TO]]` (the translator's line data: label, transliteration, normalization, lemmas + ORACC morph, the rank-3 translation; for the proverbs the proverb numbers and ETCSL's translation per proverb); `fill FILE` (replaces each `` `@` `` transliteration placeholder by the exact base line – drafting with `@` removed every retyping mismatch); `verify [UNIT|PROJECT ...] [--strict]` (coverage and order against the base text, transliteration = base, the reserved and gated Hebrew strings licensed by the line's transliteration + normalization + lemmas (word-start anchored), the name traps, the formulas (the letter formulas in their line-shapes, *niĝ₂-gig*, *giri₁₇-zal-še₃ nu-il₂*, 5.5.1's "signs"), identical source lines with different Hebrew, and `translation.rtl.md` = the `>` lines); `build PROJECT` (the clean translation from `translation--intro.rtl.md` + the `>` lines, unit and section headings, proverb numbers, footnotes from the `הערת שוליים` bullets); `grep (PROJECT|all|every) '<regex>'` (the `>` lines of this corpus / of all corpora, with the transliteration); `lookup '<regex>'` (how the earlier corpora rendered a word, by transliteration/normalization).
- **build_parallels_index.py**: `python3 -I build_parallels_index.py [--stats]` – `parallels-index.md` generated from the `הקבלה` bullets of all annotated files (one row per Bible reference, with the nearest echo tag and the quoted words), grouped by book with the Song of Songs, Proverbs and Qohelet first; the hand-written key findings above the marker line are kept on rebuild. (Unlike the earlier corpora's builders it needs no per-project parallels tables.)
- Not committed (scratch, could become generic tools): a key-lemma consistency check (for each key lemma, the lines where it occurs without its fixed Hebrew) and a converter of `` `quote`, Book ch:v `` into the checkable `` `quote` (Book ch:v) `` form.

3. Guidelines

§6.7, one bullet:

- **Everyday-voices corpus (`קולות-היום-יום/renderings.md`, 2026-10-21):** the Song of Songs' vocabulary is reserved and gated by script (`דּוֹד` only *dādu*, `גַּן` only *kirû* / *kiri*$_6$, `כַּלָּה`, `יוֹנָה`, `תַּפּוּחַ`, `צָחוֹק`, ★ only *ṣīḫtu* / *ṣiāḫu*, `אָחַז` only *aḫāzu* [cognate] – *ṣabātu* = `תָּפַס` here, a deviation from Gilgameš; `פְּרִי`, `מוֹר`, `לְבָנוֹן`, `שׁוֹשַׁנָּה`, `שִׁיר` (Akkadian) never); *ṣawāru* = `צָוַאר` [cognate], *sāqu* = `שׁוֹק`, *warādu* = `יָרַד`, *tamû* D = `הִשְׁבִּיעַ`; *mēlulu* = `שְׁחֵק`; *qadištu* `קְדֵשָׁה`, *nadītu* `נָדִית`, *kezertu* `כְּזֵרָה`, *batultu* `בְּתוּלָה`; the incantation closing *šiptum ul yâtu, šipat DN* = `הקסם אינו שלי: קסם DN`. Sumerian proverbs: *niĝ$_2$-gen$_6$-na* = `נְכוֹנָה` (ETCSL "righteousness"), *niĝ$_2$-gig DN* = `תּוֹעֲבַת DN`, *kal* = `יָקָר`, *lu$_2$-kur$_2$* = `אִישׁ נָכְרִי`, *zid* (of persons) = `אִישׁ אֱמֶת`, *si sa$_2$* = `יֹשֶׁר`, *ḫu-ru-um* = `נִבְעָר` (`כְּסִיל` only *lil$_2$*), *zeb* = `עָרַב`, *ku$_7$* = `מָתוֹק`, *ḫi-li* = `חֵן`, *gu$_2$* = `צַוָּאר` (with runs 5–6), *gu$_2$ šub* = `הִשְׁלִיךְ צַוָּאר`; the formula of 1.152–1.153 and 3.9 is *giri$_{17}$-zal-še$_3$ nu-il$_2$* `לְשָׁשׁוֹן – לֹא נָשָׂא` (not *ezen nu-tuku*). Letters: `אֶל X אֲשֶׁר זֶה / אֱמֹר: Y מַבּוּל הוּא / אוֹמֵר: הוֹסֵף: / !אוֹמֵר`; *giĝ$_4$* / *ma-na* / *gun$_2$* / *sila$_3$* = / `מָנָה` / `שָׁקַל` / `כֶּבֶשׂ` / `כִּכָּר`; *mu sa$_4$* = `קָרָא שֵׁם` (= *nabû*). False friends and traps: `ברוך` "gently" and `היינו` "we were" trip the blessing and wine gates; `שבה` / `שבו` "in it" the `שוב` gate; `לשאול` contains `שאול`; `מגן` contains `לא יכלה`; `גן` "could not" / "will perish" (vocalize `יָכְלָה`); `הבורא`, `מְאוֹרוֹת`, `אַפִּרְיוֹן`, `אַגָּן` would each import a Bible verse the tablet does not have.

§5.2, lessons (one line each):

- ★ **Write the transliteration as `` `@` `` and let the tool fill it from the base text**: retyped lines differed from the base twice in the first texts, never after. [everyday voices]
- ★ **Never write a Bible quotation, even "not as a quotation", before printing the verse**: every such note in this run had to be redone, and one was wrong (`לְכָה נָּא` for `לֶךְ נָא`, Gen 37:14); and write the reference in parentheses after the quotation (`` `…` (Book ch:v) ``), because the checker does not see `` `…`, Book ch:v `` (17 such quotations had gone unchecked). [everyday voices]
- **Anchor every gate at word start *and* end, and test it on the commonest Hebrew words of the genre**: `שבה`, `לפתיתי`, `מגן`, `ברוך`, `היינו`, `שבו` all tripped unanchored or one-letter-prefix gates. [everyday voices]
- **A pre-set formula can be wrong**: the renderings had *ezen nu-tuku* for proverbs 1.152–153 from the literature; the tablets have *giri$_{17}$-zal-še$_3$ nu-il$_2$*. Check every pre-set formula against the transliteration of its first occurrence. [everyday voices]
- **One Sumerian word, its Akkadian equivalent's Hebrew – unless the Sumerian is wider**: *ḫi-li* (= *kuzbu* `עֻגָבִים`) describes a mother's charm in 5.5.1, so it took `חֵן`; record such splits. [everyday voices]

§6.5 names (new in this corpus; vocalized at first occurrence): Nanaya `נַנָּיָה`, Muʾati `מוּאָתִי`, Rīm-Sîn `רִים־★סִין`, Abī-ešuḫ `אֲבִי־אֶשׁוּחַ`, Ammī-ditāna `עַמִּי־דִיתָנָה`, Ammī-ṣaduqa `עַמִּי־צָדוּקָה`, Šū-Sîn `שׁוּ־★סִין`, Išḫara `אִשְׁחָרָה`, Lu-diĝira `לוּ־דִיגִירָה`, Šat-Eštar `שַׁת־אֶשְׁתַּר`, Nintinuga `נִין־תִּין־אוּגָה`, Ninimma `נִין־אִימָּה`, Inim-Inana `אִינִים־★אִינַנָּה`, Inanaka `אִינַנָּקָה`; Marḫaši `מַרְחַשִׁי`, Dilmun `דִּלְמוּן`, Zabalam `זַבַּלַם`, Larsa `לַרְסָה`, Susa `שׁוּשַׁן`, Tigris `חִדֶּקֶל`.

Names and terms shared with runs 5–6 (looked up on their folders; the lead harmonizes): Belili בֶּלִילִי ★ and Dumuzi דּוּמוּזִי (adopted from run 5); Inana אִינַנָּה ★, Utu אוּתּוּ ★, An אַן ★, Enki, Enlil, Nanna נַנָּה, Nisaba נִיסָבָּה, Uruk אוּרוּךְ, Kulaba כּוּלַבָּה, Eridug אֶרִידוּ, Urim אוּר ★ (same as theirs); *gu₂* = צַוָּאר and *taškarin* / *taskarinnu* = תְּאַשׁוּר (adopted from run 5); *kur* (netherworld) = הָאֶרֶץ (run 5); *lamma* = אֲלַת־(הַ)מָגָן (same). **Splits for the lead:** *za-gin₃* = לָזוּרִית here (Gilgameš *uqnû*, LAOS 4 26, 5.5.1 30) but סַפִּיר in runs 5 and 6; *en₃-du* = זָמָר here, זִמְרָה in run 6; *guru₇* = אֶסֶם here (1.146), כְּרִי in run 6; *ĝen* imperative = בּוֹא here (2.69) – run 6 may differ.

4. History

For `history.md`, "Learned on ...":

- **Learned on the everyday voices (2026-10-21, round 2, run 7: OB love lyrics 835 lines, Sumerian proverbs 500 lines, Sumerian letters 178 lines):** the coordinator had no sub-agent tool and translated all three projects itself, text by text in the priority order, with three review passes per project (the first a read-through of every `>` line beside the normalization, the second by script – a key-lemma check and `verify` – the third on echo control and quotations). Sources: ORACC **AkkLove** (CC0, Wasserman's LAOS 4 with translations in the HTML view) replaced the planned SEAL pages; ETCSL 6.1.01–03 with ORACC Q-composites for the proverbs; ETCSL 5.5.1 and eight 3.3.x letters. The OB Akkadian letters (AbB) were not obtained (CDLI 503 all day). Findings: the Old Akkadian Kiš incantation's "to the garden you came down" and its adjuration "until ..." (Song 6:2; 2:7); *dādūka ṭābū* (Song 1:2); proverb 1.8 = Prov 25:17 (*kal* = הוֹקַר), 1.9 = Qoh 6:2 (אִישׁ נָכְרִי יֹאכְלֶנּוּ), 2.20 = Prov 20:4, 2.27 = Qoh 9:16, 3.134 = Ps 23; Lu-diĝira's mother described with the Song's wasf images and the "woman of valour". Slips caught: two retyped transliterations (then the `@` + fill workflow), seventeen quotations in an unchecked format and several written from memory (one wrong), a dozen gate collisions (`לשאול`, `מגן`, `ברוך`, `היינו`, `שבו`), the *aḫāzu* / *ṣabātu* collision (both `אחז`), a pre-set formula that the tablets do not have (*ezen nu-tuku*).

Changelog line: 2026-10-21 – Round 2, run 7 (everyday voices): §6.7 bullet for `קולות-היום-יום/renderings.md`; §5.2 lessons on `@`-filling, quoting before printing, gate anchoring, checking pre-set formulas, wider Sumerian words; §6.5 names; sources-registry §4 (AkkLove, ETCSL 6.1.01–03, 5.5.1, 3.3.x, the Q-composites); tools.md (`kol_tools.py`, `build_parallels_index.py`).

5. STATUS / plan

Plan row (curated-translation-candidates.md, Round 2, row 7):

7	קולות-היום-יום/	OB love lyrics, Sumerian proverbs, OB letters	**Done (first draft), 2026-10-21**: three projects, 1,513 lines. (1) 1-שירי-אהבה/: all 25 OB / Old Akkadian love texts of ORACC AkkLove (LAOS 4 01–07, 10, 13, 14a–f, 15–18, and the love incantations 20, 22–26), 835 lines; (2) 2-משלים-שומריים/: proverb collection 1 complete (194 proverbs, 348 lines) and a selection of 51 + 32 proverbs from collections 2 and 3 (152 lines); (3) 3-מכתבים/: the Message of Lu-diĝira to his mother and eight Sumerian letters of private life (3.3.01, 06, 07, 08, 10, 11, 12, 20), 178 lines. Annotated files, translations, parallels-index.md (492 rows, key findings), print stubs. **Not done:** the OB Akkadian private letters (AbB: CDLI 503 all day; Archibab not allowlisted); the MB/MA love texts (LAOS 4 08, 09, 11, 12, 19, 21) and the Isin incantations.

STATUS §3 row:

קולות-היום-יום/	OB love lyrics and incantations (LAOS 4, 25 texts); Sumerian proverbs (coll. 1 complete, selections of 2–3); Lu-diĝira + eight Sumerian letters	835 + 500 + 178	python3 -I קולות-היום-יום/kol_tools.py verify LOVE PROV LET; python3 -I tools/check_bible_quotes.py קולות-היום-יום//**annotated-**.rtl.md

STATUS §6, new open cross-corpus decisions:

- *niĝ₂-gig* (proverbs) and *an-zil* (city laments) both = תּוֹעֵבָה: two Sumerian taboo words, one Hebrew word (keep, or give one of them another word).
- *ṣabātu* = תָּפַס here against אָחַז in Gilgameš (because *aḫāzu*, the cognate of אָחַז, occurs here); should the Gilgameš corpus follow?
- *za-gin₃* / *uqnû*: לָזוּרִית (Gilgameš, this corpus) or סַפִּיר (runs 5, 6).
- *ḫi-li*: חֵן (Sumerian, here) vs *kuzbu* עֲגָבִים (Akkadian).
- *šiptu* / *tu₆* = קֶסֶם (followed here; the open choice of STATUS §6).
- *māru* "son" as a lover's endearment: בֵּן (literal) or יַקִּיר (LAOS 4 07, 16, 01).
- **Settled by the lead, 2026-10-21** (the cross-corpus harmonization; applied here, renderings.md §9): *za-gin₃* / *uqnû* = סַפִּיר; *niĝ₂-gig* / *an-zil* both תּוֹעֵבָה; *ṣabātu* תָּפַס where *aḫāzu* occurs; *šiptu* / *tu₆* קֶסֶם; *māru* בֵּן.

6. Limits

- No Agent (sub-agent) tool was available to this coordinator: the "translator chain" was run by the coordinator itself, one range after another, each with the written translator brief applied; the review passes were also the coordinator's (partly script-assisted). No quota, rate limit, HTTP 429 or "session limit" was met.

- CDLI (`cdli.earth`) answered HTTP 503 from 15:00 (2026-10-21) on (a background probe ran until its time limit).
- **Push:** every `git push origin main` was rejected (non-fast-forward: the user rewrote origin/main's history, moving `docs/` to its own branch). As instructed by the brief (no pull / rebase in the shared checkout) the commits stayed local; the lead replays them onto the new origin/main and pushes them (the lead's message: commits up to 943a4ee4 were already on origin). Pushing was stopped on the lead's instruction.

7. Report

Translated and verified: 1,513 lines in three projects, all first drafts, each with three review passes.

- **Project 1, `שירי-אהבה-1/`** – all 25 OB / Old Akkadian love texts with an open base text (ORACC AkkLove = LAOS 4): the divine love songs of Nanaya and Muʾati for Abī-ešuḫ (10), the New-Year song for Rīm-Sîn (15), the dialogues "the faithful lover" (16, with its duplicate 04) and "like an apple of its season" (01), the Ištar–Dumuzi song (07), the *irtum* series for Ammī-ditāna (06), the Kiš songs (13, 14a–f), the bawdy dialogue (18), the shorter 02, 03, 05, 17, and the love incantations (22 Old Akkadian; 20, 23–26 OB). 835 lines in 16 annotated files; `translation.rtl.md` (20 footnotes).
- **Project 2, `משלים-שומריים-2/`** – Sumerian proverb collection 1 complete (194 proverbs, 348 lines) and 83 proverbs (152 lines) from collections 2 and 3, chosen for daily life and for their biblical parallels. 500 lines in 5 files; `translation.rtl.md`.
- **Project 3, `מכתבים-3/`** – the Message of Lu-diĝira to his mother (57 lines) and eight Sumerian letters of private life (121 lines).
- Checks: `kol_tools.py verify LOVE PROV LET` OK (coverage, transliteration = base, reserved/gated strings, name traps, formulas, translation = `>` lines); `check_bible_quotes.py` 0 problems on every annotated file; `parallels-index.md` generated (492 rows: Song of Songs 180, Proverbs 67, Genesis 57, Psalms 41, Qohelet 20); print stubs `הדפסה/קולות-היום-יום/1-שירי-אהבה.rtl.md`, `2-משלים-שומריים.rtl.md`, `3-מכתבים.rtl.md`.

Key findings for the Bible (details: `parallels-index.md`, key findings 1–20): the Old Akkadian incantation from Kiš has "to the garden you came down … you came down to the garden" (Song 6:2, 6:11) and an adjuration "I adjure you … until … – you shall not rest" with the frame of Song 2:7 / 5:8, sworn by Ištar and Išḫara where the Song swears by gazelles; *dādūka ṭābū* "your love-making is good" (Song 1:2) and the Kiš wasf's *sissinnu* (the Song's hapax סַנְסִנָּיו); the reversed counsel of father and mother in a love charm (Prov 1:8). Proverb 1.8 is Prov 25:17 (הֹקַר רַגְלְךָ, the same verb *kal*), 1.9 is Qoh 6:2 (אִישׁ נָכְרִי יֹאכְלֶנּוּ), 2.20 is Prov 20:4, 2.27 is Qoh 9:16, 3.176 is Qoh 9:2, 3.118 puts the false witness among the gods' "abominations" as Prov 6:16–19 does, and 3.134 calls the personal god a shepherd who finds pasture (Ps 23). Lu-diĝira describes his mother with the Song's wasf images and with the virtues of the "woman of valour" (Prov 31), and his message ends like Joseph's "your son … is alive" (Gen 45:9, 26); the sick woman's letter-

prayer has the friends who stand far off (Ps 38:12), the vow to serve in the temple court (Ps 84:11) and "I will call your name" (Ps 116:13); Gudea is "like sheep without a shepherd" (Num 27:17); Ur-saga's "let no one take my father's house" is Naboth's plea (1 Kgs 21:3).

The ancient mind: love as a force one "seizes" and "casts" (the incantations), sung at court where the king is the goddess's lover, and voiced by women who plead, reject, mock and forgive; the proverbs' world of bread and salt, the poor man nobody greets, the fox's boasting, the scribe who knows no Sumerian, the curse that breeds curses, the girl who chooses her husband, the mother cooling the soup with her mouth; the letters' homesick boy who complains that the bread and beer are stale, the son who cannot look after his mother, the sick woman whose friends stay away, the teacher who sends a pupil silver and clothes – and ends, like every urgent letter, "it is a flood!".

Open decisions for the user (in each `project.md`, and §5 above): *niĝ₂-gig* / *an-zil* both `תּוֹעֵבָה`; *ṣabātu* `תָּפַס` vs Gilgameš `אָחַז`; *za-gin₃* `לָזוּרִית` vs `סַפִּיר`; *ḫi-li* `חֵן`; *šiptu* `קֶסֶם`; *māru* `בֵּן` vs `יַקִּיר`; *irimmu* `חָרוּז`; *sukannīnu* `תּוֹר`; *gu₂* `צַוָּאר` shared with *ṣawāru*.

Skipped or failed: the OB Akkadian private letters (AbB) – CDLI 503 all day, Archibab not on the allowlist; the MB/MA love texts and the Isin incantation tablet (outside the brief's "OB" or not in the export). The run had no sub-agents; all pushes were rejected (local commits, replayed by the lead).
