R. Campbell Thompson, *The Epic of Gilgamish: Text, Transliteration and Notes* (Oxford 1930)

- **Editor:** R. Campbell Thompson
- **Publisher/year:** Oxford: Clarendon Press, 1930. Cuneiform hand-copies (plates), transliteration and philological notes, with no translation (his translation is the 1928 volume).
- **URL:** https://archive.org/details/epicgilgamish0000rcam (Internet Archive "internetarchivebooks" scan, **full view / downloadable**, not lending-restricted). HathiTrust could not be checked (Cloudflare block).
- **Retrieved:** 2026-10-16
- **License / copyright:** Public domain. Author died 1941, so it is PD in life+70 countries. In the US, 1930 publications entered the public domain on 1 Jan 2026.

Files

- `epicgilgamish0000rcam.pdf`: full volume (10.6 MB).
- `epicgilgamish0000rcam_djvu.ocr.txt`: archive.org OCR of the whole book. The OCR is poor for transliteration (š→S/$, diacritics lost).
- `tablet-XI-transliteration.ocr.md`: OCR lines 4340–5138 = Tablet XI (Assyrian version) transliteration, Plates 44–54, ll. 1–~308 + colophon.
- `notes-around-XI.ocr.md`: OCR of the notes section around Tablets X–XI.

Line numbering

This is Thompson's numbering, also used in his 1928 translation and largely by Heidel. See `../Campbell-Thompson-1928/README.md` for how it maps to George. Thompson's Tablet XI runs to ~307 lines + catch-line. George's runs to 328 + catch-line, because George adds Assur, Babylon and Nimrud manuscripts and divides some lines differently.

Assessment

This was the standard text edition for 70 years (it superseded Haupt) and was replaced by George 2003. Its plates and readings are useful as a historical check on readings George discusses ("Thompson read …"). Do not use it as the base text. Use the PDF page images, not the OCR.
