CAD: *The Assyrian Dictionary of the Oriental Institute of the University of Chicago*

- **What:** the largest Akkadian dictionary (21 volumes in 26 physical parts, 1956–2010). Each entry gives the forms, a semantic analysis by period and genre, and full quoted citations with translations.
- **Publisher / host:** ISAC (Institute for the Study of Ancient Cultures, formerly the Oriental Institute), University of Chicago
- **Series listing (source of the table below):** https://isac.uchicago.edu/publications/search?text=&sort_by=year_desc&publication_series%5B62%5D=62 (two pages; `&page=1` for the second)
- **Retrieved:** 2026-10-16. Every PDF URL was checked with `curl -I` (HTTP 200 + Content-Length) on that date.
- **Licence / terms:** free download, but **copyright reserved** (ISAC Terms of Use, saved here as `isac-publications-terms-of-use.md`). Two points matter for us:
  - no reproduction or distribution without permission;
  - *"ISAC does not authorize the use of its copyrighted publications … for training, fine-tuning, or developing artificial intelligence models, or for compiling datasets for these purposes, without prior written permission."*
  - → Consult CAD entry by entry while translating, and quote short passages with citations ("CAD K 498 s.v. *kupru*"). **Do not** build a bulk text extraction or dataset of CAD, and do not commit the PDFs to the repo (they total ≈ 790 MB anyway).
- **Print:** about US$60 per volume via ISD (the "Buy" links on the ISAC pages).

How to use it

- Download a volume to a scratch or cache directory **outside the repo**, e.g. `curl -o ~/cad/cad_k.pdf https://isac-assets.s3.amazonaws.com/isac-publications/cad_k.pdf`.
- The S3 URLs work **without** the `?VersionId=…` query string that the ISAC page appends; the table gives the clean URL.
- Text layer (checked on G, P and Ṭ): every PDF can be searched, but the diacritics come out unreliable.
  - **Born-digital** volumes (FrameMaker, verified for P and Ṭ; probably also R, T, U/W given their 1.7–4.8 MB sizes) usually extract `š` as `ß`.
  - **Scanned** volumes (300-dpi bitonal page images + OCR, e.g. G) come out as `AN§E gam-ma-li Sa SarrdniAribi`.
  - → Search by **unaccented** headword or a distinctive English word with `pdftotext -layout`, then look at the page image (`pdftoppm -f N -l N -r 150 -png`) to read the accented forms.

- Find the volume: use the letter of the headword in CAD's alphabetical order (A, B, D, E, G, Ḫ, I/J, K, L, M, N, P, Q, R, S, Ṣ, Š, T, Ṭ, U/W, Z). Ḫ has its own volume, Š has three parts, and so on.
- Cross-check older volumes (A–N were published 1956–1980) against **eSAD** (Leipzig), which corrects and supplements both CAD and AHw. See `../RESOURCES.md`.

Volumes (26 PDFs, ≈ 788 MB total)

Vol.	Letter(s)	Year	PDF (direct URL)	MB	HEAD	ISAC page
