Intro

We support Claude sessions with both *Hebrew* and *English* system-prompts.
We have comprehensive system-prompts in both languages (this session was started in a way that did not auto-load these system-prompts).

How are the system-prompt files structured:

The file `CLAUDE.md` contains a single line: either `@.claude/system-prompt--Hebrew.md` or `@.claude/system-prompt--English.md`

The file `.claude/system-prompt--Hebrew.md` contains these three lines:

```
@system-prompt--Hebrew--prefix.rtl.md
@../פירוש/הקדמה-לפירוש.rtl.md
@system-prompt--Hebrew--suffix.rtl.md
```

The file `.claude/system-prompt--English.md` contains these three lines:

```
@system-prompt--English--prefix.md
@system-prompt--English--perush-intro.md
@system-prompt--English--suffix.md
```

So effectively, a Claude session reads `CLAUDE.md`, and then one of the `.claude/system-prompt--<language>.md` files, and then - the three "real content" files - the three parts of the system-prompt - in order:

Part	Hebrew	English
Part 1	`.claude/system-prompt--Hebrew--prefix.rtl.md`	`.claude/system-prompt--English--prefix.md`
Part 2	`פירוש/הקדמה-לפירוש.rtl.md`	`.claude/system-prompt--English--perush-intro.md`
Part 3	`.claude/system-prompt--Hebrew--suffix.rtl.md`	`.claude/system-prompt--English--suffix.md`

Both suffix files embed the same language-neutral file `.claude/system-prompt--tools.md` (technical instructions for the tools that work with Hebrew files), via the line `@system-prompt--tools.md`.

This file is shared - it is *not* translated: keep the `@system-prompt--tools.md` line in the same position in both suffix files.

The task: "import" changes in the Hebrew system-prompt - to the English system-prompt

Please check which of the three Hebrew files has uncommited (staged or unstaged) changes, and "import" these changes into the matching English files.
Important: to properly understand the context of changes in the Hebrew files - you *must* first read the *whole* of the three Hebrew files - in order.

Per changed Hebrew file:

- Analyze the uncommited changes in the Hebrew file, and understand them deeply and in their context.
- Apply these changes into the matching English file.

Be thorough and take your time: understand the Hebrew changes deeply, and craft the English translation with a holistic and contextual approach - so the English changes are harmonious within the whole English system-prompt.
